New Leaders of the Fruit World

Rio Oso Gem Peach

United States Plant Patent No. 84. Nov. 28, 1933

World’s Largest Peach

A Tremendous Money Maker for Growers

Commercially speaking, Elberta just about ends the peach deal each year, consequently growers for several generations have been anxiously looking for a late ripening, yellow, freestone peach of large size, high red color and good flavor, to extend their shipping season, and have eventually found it in the newly discovered marvelous Rio Oso Gem. This new variety has been awarded U. S. Plant Patent No. 84 of the U. S. Patent Office.

LARGER THAN J. H. HALE

The Rio Oso Gem is a perfect freestone, form is globular, slightly elongated, of extremely large size, averaging in diameter from 2 1/2 to 3 inches, deep yellow flesh, very fine grain, firm texture, with very excellent flavor, being rich, juicy, sweet and slightly spicy.

The coloring is unique, being a beautiful dark crimson red, running out to lighter crimson and into a rich mottle of crimson over the orange-yellow ground color. It is a good transcontinental shipper.

BEARS HEAVIER THAN ELBERTA

Rio Oso Gem is an extremely heavy bearer and on account of its prolific set of fruit, it is necessary to practice extremely heavy thinning. It has hardly, vigorous fruit buds, which insure it being a heavy annual bearer. The tree bears young.

RIPENS 2 WEEKS LATER THAN ELBERTA

The Rio Oso Gem would be a peach of commercial importance when ripening at any time during the peach season, but it is very fortunate that it ripens two weeks later than Elberta, which puts it at a time when there is no other variety of commercial importance as a competitor, and fills a long looked for gap in commercial production, ripening when the markets are clamoring for peaches—this variety has sold at very much higher prices than Elberta and J. H. Hale. To prolong your peach shipping season, we highly recommend to you planting the Rio Oso Gem. Harrisons have planted several thousand Rio Oso Gem in their own famous orchards. We have the utmost faith in the Rio Oso Gem, and we will also make future plantings of this remarkable peach.

Red Yorking Apple

U. S. Plant Patent No. 125

Prices on Red Yorking Apple Trees

1 to 9 10 to 49 50 or more
10 trees 15 trees 25 trees
2 yr. 6-7 ft. $1.50 $1.25 $1.10
2 yr. 5-6 ft. 1.25 1.10 .95
2 yr. 4-5 ft. 1.00 .90 .75
1 yr. 5-6 ft. 1.25 1.10 .95
1 yr. 4-5 ft. 1.00 .90 .70
1 yr. 3-4 ft. .80 .70 .60
1 yr. 2-3 ft. .60 .50 .45
1 yr. 1-2 ft. .40 .35

Prices apply only to quantities of “Red Yorking” apple trees ordered and cannot be assorted varieties of other apples and other fruits.

THE “RED YORKING” IS ONE OF THE GREATEST DEVELOPMENTS IN THE HORTICULTURAL WORLD.

Sensational New Triple Red York Imperial

The Red Yorking apple is the utopian variety which growers have long wished for in the York Imperial producing sections. The York Imperial has been most extensively planted and has gained its greatest prestige in Southern Pennsylvania, Maryland, West Virginia and Delaware and is generally considered in those states as the best average money maker, consequently this second largest commercial apple district of the Nation has been startled and amazed as to the unusual merits of the new “bud sport” variety “Red Yorking.”

The Glorified York Imperial

The Red Yorking is a “bud sport,” being a mutation of the famous York Imperial. This “bud sport” originated on a tree, grown with other York Imperial trees, in Harrisons’ Nurseries and later sold to Mr. W. H. Allison, near Shippensburg, Pennsylvania for use in planting a large orchard about twenty-four years ago.

Earlier Coloring—More Extra Fancy Fruits

The “Red Yorking” is similar in its parent in size and shape but its chief distinction is that it has very much better red color, being mostly 100% bright red color. The Red Yorking takes on high red color from two to three weeks earlier in the fall than York Imperial, which is a distinct advantage in selling, as the earliness in season and high red color will command much higher prices.

The “Red Yorking” is a more vigorous grower and a heavier producer than York Imperial. The York Imperial has been the outstanding apple in certain districts for several decades, but it will soon be replaced in prominence by its off-spring, the “Red Yorking.”

Harrisons’ Nurseries, Berlin, Md.

Growers of the World’s Best Fruit and Ornamental Nursery Stock
THE LEADERS OF THE

Elberta The World's Greatest and
Best Money-Making Peach

Yellow, freestone. Midseason. Fruit is large to extra large; golden yellow with brilliant shades of red; firm, jucy, rich, sweet and good flavor. Elberta has the greatest international reputation of any peach. It has been the standard for all other peaches almost since the date of its introduction. The coloring of Elberta is practically perfect. The rich, yellow skin is almost entirely covered with dark red blush upon the sunny side. This attractive appearance and the uniform large size serve to sell it almost on sight.

Best For Commercial Plantings

Tree is vigorous, very hardy, sturdy, thrives in widely different localities. Elberta is hardier in bud than most varieties, and is a uniform prolific bearer. You can always depend on Elberta as a sure cropper.

Elberta Is The Best Long Distance Shipper

The large fruit, being uniform in size and shape, along with its high attractive red color and firmness, also its ability to stand shipments of refrigeration in cars for two or three weeks before being consumed, but with stamina enough to still look its best, has won Elberta the reputation of being a peach without a peer and the variety which is always in favor and strong demand with the buying public, therefore demanding the highest possible market prices. Elberta is by far the best shipping peach.

Plant Harrisons’ Superior Strain

We believe we have the best strain of Elberta obtainable. In our own commercial orchards we have tens of thousands of this strain, it was obtained from the late Samuel H. Rumph of Marshallville, Georgia, the originator of Elberta, from the original tree and budded in our nurseries.

There are many types of Elberta, and the “Best Strain” is the cheapest and most profitable in the long-time investment. We recommend planting fifty to seventy-five per cent of your commercial orchard to Elberta.

Golden Jubilee

Commercial peach orchardists for a Century have been looking for an early peach of high quality, fine flavor, yellow, freestone, attractive color, and firm texture, and eventually they have found it in the marvelous Golden Jubilee. This variety is a sensation of recent introduction of new varieties and is by far better than any early variety of commercial importance which has been introduced in many years. It ripens about five days ahead of Carman.

Tried and Proven

There are numerous bearing Golden Jubilee peach orchards throughout the United States and leading practical fruit growers in the Middle Atlantic and Northern States have pronounced it as a worthy member of the preferred commercial list. In most localities the fruit of the Golden Jubilee will attain extra large size. One of its most remarkable features is that it is very hardy in fruit bud and will withstand bitter cold weather better than most varieties. It is a cross between the hardy Greensboro and the famous Elberta.

Plant Golden Jubilee

The past summer was a Banner Year for Golden Jubilee as it bore huge crops of Fancy Fruits, which sold at premium prices on leading American markets. It is the finest peach obtainable for competing with southern Elbertas on the eastern markets. We recommend every peach grower north of the Carolinas to plant this variety; we, ourselves, have planted several thousand trees and we feel that you will not make any mistake in planting it. Good for either home use or commercial plantings. Our strain of the Golden Jubilee is the original strain that was introduced by the New Jersey Experimental Station.

“Harrisons’ Trees Succeed”

Harrisons’ Peach Trees will come into bearing earlier, produce larger crops and return their grower more profits, because they are budded direct from bearing trees of superior strains.

Harrisons’ Nurseries, Inc.
Berlin, Maryland

FOR PRICES SEE OTHER SIDE
Hiley Bears Huge Crops of Fancy Peaches

Early, white, freestone, medium size, highly red colored and is a very handsome peach of exceptionally good flavor. Tree is a strong grower, very healthy and an extra heavy bearer. You can depend on Hiley to bear heavy crops year after year. The marvelous color and wonderful flavor have made it extremely popular on the markets.

Excellent Shipper

Hiley has the stamina to withstand long hauls under refrigeration better than any other white peach. It is easily packed in six gallon carriers, bushels or half bushels and has met with a widespread demand on the Eastern markets. Southern growers claim Hiley is their most profitable white peach.

One of the best varieties for Southern planting

For planting in orchards south of Pennsylvania we can unhesitatingly recommend planting Hiley. It has been one of the best moneymaking peaches that was ever grown in the South. This season our Hiley peaches sold for more than any other variety we shipped. We offer Hiley trees that were propagated from the original strain. Add Harrisons' Strain of Hiley to your commercial planting for real profit.

BELLE OF GEORGIA

Ripens early in August. Color creamy white with red cheek. Flesh is white with some red near pit. Size large. Freestone.

Bears Bumper Crops Every Year

The tree is an exceedingly strong grower and has established heavy bearing records throughout the East. It withstands sub-zero temperature much better than most varieties in its season. By bearing heavy crops when other varieties were light it has made its growers large profits in the last few years.

Prospers North and South

Few peaches are as well adapted to different conditions as Belle. Although it originated in the South and still produces large crops for many Southern orchardists, it has been equally successful in the North and we recommend it as a profitable variety.

Best All Around White Peach

Belle of Georgia, for some time has been recognized as the best all around white peach on the market. It is easily the best shipping white peach of its season, ranking almost with Elberta in this respect. All who have eaten this marvelous peach are highly enthusiastic about its flavor. Whether you are planting one tree in your home orchard or a large orchard we can unhesitatingly recommend this phenomenal variety.

J. H. HALE

EXTRA LARGE SIZE

Yellow, freestone, extra large, beautiful red coloring; firm and of the highest quality and enticing flavor. J. H. Hale ripens about two or three days prior to Elberta.

Hales are too large to properly pack in six-gallon carriers, but they make the most attractive and commanding appearance when packed ring-faced in hLexer and half-bushel baskets. The Hale quickly made a national reputation and is a strong competitor of the Elberta, being just about as good a shipper as Elberta.

BRINGS HIGHEST MARKET PRICES

Prices on J. H. Hale and Elberta with a large national crop are about the same, but on a short crop year Hales usually sell from 5c to 50c and sometimes 75c more per bushel on large wholesale markets.

ORIGINAL STRAIN J. H. HALE

Our Hale are propagated direct from the original strain, the variety being originated by the late J. H. Hale of South Glastonbury, Connecticut and Port Valley, Georgia, who at one time was the Peach King of America. There are many types and strains of J. H. Hale grown, but the only one worthy of commercial importance is the original strain, which is the extra large, round, highly colored peach. The original strain necessitates cross-pollination and it is necessary, for proper results, to plant a few Belle of Georgia or Hiley along with Hales for cross-pollination.

The tree is somewhat dwarf, a moderate grower and should be planted on the richest, best, well drained soil available. The Hale needs more cultivation and fertilization than most varieties.
THE LEADERS OF THE PEACH INDUSTRY

Elberta The World's Greatest and Best Money-Making Peach

Yellow, freestone. Ripens: Fruit is large in extra-large; golden yellow with brilliant shaded of red. Best, heavy, sweet and good flavor. Elberta has the greatest international reputation of any peach. It has been the standard for all other peaches almost since the date of its introduction. The coloring of Elberta is practically perfect. The rock, yellow skin in all most entirely covered with dark and blushed upon the sunny side. This attractive appearance and the uniform large size serve to sell it almost right.

Best For Commercial Plantings

Tree is vigorous, very hardy, sturdy, thrives in widely different locations. Elberta is hardy in the most severe weather, and is a uniform prolific bearer. You can always depend on Elberta as a sure crapper.

Elberta Is The Best Long Distance Shipper

The large fruit, being uniform in size and shape, along with its high attractive color and flavor, also its ability to stand some degree of drought, or more like, to remain edible for a longer period than most others, makes it the ideal shipper. Elberta is the most uniformly sized and the best tasting of the peaches. Elberta is by far the best long distance shipper.

We believe we have the best strain of Elberta obtainable. In our own commercial orchards we have tens of thousands of this strain, it was obtained from the late Samuel H. Hiley of Maryland City, Georgia, the originator of Elberta, from the original tree and budding in our own nursery. There are many types of Elberta, and the "Best Strain" is the strongest and most profitable in the long run investment. We recommend planting it in seventy-five per cent of your commercial orchards to Elberta.

Golden Jubilee

Commercial peaches exclusively for a century have been looking for an early peach of high quality, free flavor, yellow, freestone, attractive color, and pulp texture, and eventually they have found it in the wonderful Golden Jubilee. This variety is a new introduction and offers a great advantage in southern locations and is far better than any early variety of commercial importance which has been introduced in many years. It ripens about five days ahead of Elberta.

Plant Golden Jubilee

The fruit season was a bumper year for Golden Jubilee as it bore huge crops of Fancy Fruit, which sold at premium prices in our native American markets. It is the finest peach obtainable for competing with southern Elberta on the eastern market. We recommend every peach grower north of the Carolinas to plant this variety in their orchard, and we believe it will do as well the first year as the best. It is one of the most promising varieties ever introduced, it will sell itself at any price, and is sure to attain the same high reputation that the Elberta has obtained.

Tried and Proven

There are numerous bearing Golden Jubilee peach orchards throughout the United States and bearing peach grower in the Middle Atlantic and Northern States have praised it as a worthy member of the grocer's commercial list. In most localities the fruit of the Golden Jubilee will attain much larger size. One of its most remarkable features is that is it very hardy in fruit and will withstand bitter cold weather better than most varieties. It is a cross between the hardy Greensboro and the famous Elberta.

Hiley Bears Huge Crops of Fancy Peaches

Early, white, freestone, medium size, highly colored and is a very hardy peach, of exceptionally good flavor. It is a strong grower, very healthy, and an extra heavy bearer. You can depend on Hiley to bear heavy crops year after year. The marvelous color and wonderful flavor have made it exceedingly popular on the markets.

Excellent Shipper

Hiley has the stamina to withstand long hard under refrigeration better than any other white peach. It is easily packed in six gallon containers, boxes or half boxes and has met with a wide spread demand on the Eastern markets. Southern growers claim Hiley is their most profitable white peach.

One of the best varieties for Southern planting

For planting in orchards south of Maryland we can unhesitatingly recommend planting Hiley. It has been one of the best moneymaking peaches that has ever grown in the South. This peach is a commercial peach sold for many a year earlier than most other varieties are shipped. We offer Hiley trees that were propagated from the original strain. Add Harrisons' Strain of Hiley to your commercial orchards for early crops.

BELLE OF GEORGIA

Begun early in August, color remains while with red cheek. Colorful white, with a red cheek, the large freestone.

Bears Bumper Crops Every Year

The tree is a unusually strong grower and has established himself among leading growers throughout the State. It ripens in the medium temperature ranges, better than most varieties in its season. It becomes proper for picking after Easter, and ripens in the Georgia market.

Prosper North and South

Few varieties are so well adapted to different conditions as Belle. Although it is confined to the South and is produced large crops for the eastern Southern markets, it has been very successful in the western markets. The Belle is a prolific bearers, and will fill the market where it is grown.

Hiley

Elberta

Yellow, freestone, extra large, beautiful red coloring, firm and of the highest quality and market value. It sells at premium prices and is well known in all the leading southern markets. We offer it in the most beautiful condition. The Hiley is one of the best fruiting trees in America.

Hiley Fruit

J. H. HALE

EXTRA LARGE SIZE

Yellow, freestone, extra large, beautiful red coloring, firm and of the highest quality and market value. It sells at premium prices and is well known in all the leading southern markets. We offer it in the most beautiful condition. The Hiley is one of the best fruiting trees in America.

HARRISONS' EVERGREENS FOR YEAR AROUND BEAUTY

Truly the aristocrats of freedom, lending year around beauty to your home surroundings. We have an unusual assortment this season of evergreens in green, golden and silver, which make the most attractive combination for planting as a foundation planting in groups or as specimen trees.

You pay no more for Harrisons’ super-grade Evergreens, all of which are selected individually as to shape and foliage, than you do for second grade stock, that is dug up in the nursery row, regardless of the development. All our evergreens are balled and burlapped in the fertile soil in which they are grown, thereby assuring healthy and vigorous growth.

Greatest scarcity of Fruit Trees in Nurseries Throughout the United States for Forty Years. To be sure of getting what you want Buy Now
PLANT NOW

Fall and early winter during the months of November and early December are recognized by the most experienced planters as one of the best times for planting most varieties of fruit and ornamental nursery stock. By planting at this time you can be sure that the trees, plants and shrubs that you buy are in ripe condition for transplanting. If they are dug before the sap flow normally stops there is a possibility that much damage will be done to the plants in transplanting.

In states bordering and just south of the Mason-Dixon line practically all items of nursery stock can be planted anytime during the winter that the ground is free from frost.

Do not let a few light frosts and freezes delay your planting this year

Fall and winter planted stock has one great advantage over spring planted stock in that it will start to grow earlier in the spring. It is a well known fact that the roots on all trees, plants and shrubs grow during the winter time and get well established before the late spring droughts.

It is a mistaken idea among many planters that nursery stock should be planted early in the fall. However, this is entirely wrong as it is absolutely necessary to let the stock be fully matured before it can safely planted. After you have had a few cold periods and before the ground is frozen is the ideal time for planting deciduous nursery stock.

OUR LARGE ORGANIZATION OF TRAINED NURSERYMEN ARE PREPARED TO GIVE YOUR ORDER, LARGE OR SMALL, PROMPT EFFICIENT SERVICE

Harrison Grown Stock

We wish it were possible that everyone interested in the planting of fruits or ornamentals could visit our vast nurseries and orchards here at Berlin. We feel sure if we could show you and explain the methods by which our plants are grown and also show you the actual plants in the fields that are ready for digging and shipping now, you would be convinced of the quality of stock we produce.

Hundreds of our friends visit us at Berlin every year, scarcely anyone who looks over our nursery fails to express wonder at their extent and admiration at the care with which we till each individual block. Fruits and ornamentals alike receive painstaking attention.

The Harrison Brothers devote their entire time to the growing of quality trees, shrubs and plants, constantly improving methods of growing, digging and shipping nursery stock and always on the alert to thoroughly investigate and test new varieties and strains of fruit before we recommend them to our customers.

This year we are offering for the first time a new marvelous peach, Rio Oso Gem, and also the Red Yorking apple. Both of these fruits are protected by United States Plant Patents. We unhesitatingly recommend these two varieties for planting in every fruit section in the East.

Harrisons' reputation on fruit trees has been built up by the fact that over a quarter of a million customers have found by actual test of growing and fruiting our trees that they have proven to be absolutely true to name, the best strains for the respective varieties, hardy, sturdy, vigorous, withstanding the rigid cold winters of Canada, as well as the hot scorching summers of Georgia, Florida, Texas and Mexico.

There is a drastic shortage of fruit trees throughout the nurseries of the Nation, as a matter of fact the greatest scarcity that has existed at anytime during the past forty years.
